You may play the pokies for a quick flutter or even a longer session of gambling, but how much do you really know about these gaming machines and how they work?

Poker machines are designed to make a profit for the venues licensed to operate them. In NSW, those venues are hotels, registered clubs and the casino. While poker machines can be a fun way to spend money, they are not designed to help people make money. Although you may win some money in the short-term, in the long-term it is virtually impossible to come out ahead.

position on each reel are programmed into the machine. These positions are permanent and do not change from game to game. The other positions on the reel have other symbols permanently assigned.

The random choice of stopping position is done separately and independently for each reel. On a machine with five reels and 35 possible stopping positions on each reel, there are about 52 million possible stopping combinations.

Each gaming machine is designed differently and has different odds of winning the maximum prize, but generally your chance of winning the jackpot is no better than a million to one, and may be much lower than this.

In the long run, the machine is designed to come out ahead and you will lose money.

What is a game of chance?

Gaming machines are games of chance. Whether you win or lose is totally a matter of luck.

In games of chance there are no playing methods or patterns that can have any effect on whether you win or lose. Gaming machines contain a computer program known as a random number generator.

Each time you press the button to play a game, the computer program randomly selects the position of each symbol or picture.

The NSW Government checks the operating programs for all gaming machines to ensure that they meet strict technical standards. It is illegal for anyone to tamper with machines or change the operation of a gaming machine without prior approval.

Gaming machines cannot think or remember. They are operated by computer programs that produce random outcomes.

How do gaming machines work?

Gaming machines have reels which feature symbols or pictures. The symbols assigned to each stopping

Can you improve your odds?

No – outside factors do not have any bearing on the outcome of a gaming machine game, including previous games.

This means it is impossible to predict a gaming machine's behaviour. Each symbol that comes up is chosen randomly.

It does not make a difference whether:

- you play a machine straight after someone else has had a big payout from it
- you play a machine that has not had a big payout over a long period of time
- you play at certain times of the day or night
- you play on certain days of the week
- you press the buttons a certain way.

You cannot alter the outcome of a pokies game.

Betting on Lotto, Lotteries or Keno?

NOVEMBER 2020 | ENGLISH
2-English, 1220, LG32100

GAMBLEAWARE
gambleaware.nsw.gov.au

You may hear of people having a win with Lotto and Powerball, getting lucky in the lottery, or having winning numbers come up in Keno.

The odds of winning differ depending on which game you play, and so do the prizes. The winning numbers and tickets are all drawn randomly. So there is no playing strategy to increase your chances of winning.

What chance have you got of winning the draw?

Lotto

Lotto draws are conducted on Monday, Wednesday and Saturday. In Lotto there are 45 balls, numbered from 1 to 45. Eight are selected at random by the drawing machine. The first six balls chosen are the winning numbers and the last two balls are the supplementary numbers. At least four games must be played on each card. The chance of choosing all six winning numbers and winning Division One with a single game is **8.1 million to one**.

Lotto Strike

Lotto Strike is based on Lotto. Players choose four numbers between 1 and 45. To enter Lotto Strike, you must also play Lotto. Prizes are awarded according to how many match the first four Lotto numbers drawn, but only when the numbers chosen are in the correct order. The chance of matching four numbers in the correct order is **3.5 million to one**.

Powerball

In Powerball there are 35 balls numbered from 1 to 35, from which seven are drawn at random. An eighth ball, the Powerball, is then drawn from another drawing machine which contains 20 balls numbered from 1 to 20. You must play at least four games in a draw. Powerball prizes are usually bigger than Lotto's, but Powerball is about 16 times harder to win. The chance of getting all seven winning numbers plus the Powerball, within a single game, is **134 million to one**.

Oz Lotto

Oz Lotto has 45 balls numbered from 1 to 45. Nine are drawn at random. The first seven drawn are the winning numbers and the last two are the supplementary numbers. The chance of winning Division One with one game, by choosing all seven winning numbers, is **45 million to one**.

Instant Lotteries – 'Instant Scratch-Its'

Also called Instant Scratch-Its, Instant Lotteries involve revealing numbers, symbols or pictures on a ticket. The actual odds that you will win differ according to the kind of game played. As an example, the chances of winning the top prize on a \$2 Instant Scratch-Its ticket is **1.25 million to one**.

Draw Lotteries – 'Lucky Lotteries'

The Lucky Lotteries Super Jackpot has 270,000 tickets so your chance of winning the first prize with a single ticket is 1 in 270,000. There are over 11,800 other prizes in each draw, so the chance of winning any prize is about 1 in 24. Most of these prizes are very small, such as free tickets in another draw. The jackpot is an additional prize which is only won on an average of once every 70 draws. The chance of winning the jackpot with a single ticket is about **18 million to one**.

The Lucky Lotteries Mega Jackpot has 200,000 tickets. Your chance of winning the first prize with a single ticket is 1 in 200,000, but the chance of winning any prize is about 17 to one. The jackpot

is won about once every 47 draws. The chance of winning the jackpot prize with a single ticket is about **9.4 million to one**.

Ongoing Payment Lottery – 'Set for Life'

A Set for Life ticket is played across seven consecutive daily draws and you must play at least two games at a time. In Set for Life, nine numbers are randomly selected from a set of 44 numbers, numbered from 1 to 44. The first seven numbers selected are the winning numbers, and the last two numbers are the supplementary numbers. The chance of winning the Division 1 prize, by matching all seven numbers in a single game, is **38 million to one**.

Keno

In each game of Keno, 20 numbers are randomly drawn from 80, and prizes are based on how many of your selected numbers match those drawn. Players can choose 1-10, 15, 20 or 40 numbers in each game. If you choose to play 7, 8, 9 or 10 numbers, a proportion of your bet will be added to a jackpot pool which you will then have a chance of winning. The chance of winning the 10 number jackpot is **8.9 million to one**. Keno is available to play in many registered clubs, hotels and casinos.

Can you improve your odds in lotteries or Keno?

No – because the winning numbers are drawn at random, any set of numbers has exactly the same chance of winning as any other. The games are all approved by the NSW Government to ensure they are fair. There is no 'best game' to play. Some games have very big prizes which are very hard to win, while Draw Lotteries and Instant Lotteries give you a greater chance of winning a very small prize.

What's gambling really costing you?

Most people gamble at one time or another. It may be on poker machines, at the TAB, on the lotteries or at the casino. For many people, gambling is fun, entertaining and causes no harm.

However, for some people, gambling can become a problem. Gambling can come at a high cost - financially, emotionally and personally. Gambling can be harmful for the person who gambles, and their family and friends.

How do I know if gambling is a problem?

If gambling is causing stress or anxiety, it might be a sign that it's a problem. Other signs that gambling is causing harm are:

- feeling guilty, anxious or depressed about gambling
- losing control of how much time or money is spent on gambling
- withdrawing from family and friends
- trying to win back losses by continuing to gamble
- borrowing money or selling valuables to gamble
- falling behind with bills or signing up for new credit cards
- thinking about gambling every day
- lying about gambling

If you or someone you know is experiencing any of these signs, it's important to reach out for information and support. You can contact GambleAware, a free and confidential service for people who gamble, and their families and friends.

It's never too late to get help - you can reach out today.

Help is close at hand

You can get information and support by contacting GambleAware.

GambleAware has a confidential phone service that provides information, support and referrals. It's available anytime: 24 hours a day, seven days a week. It's a free call - in fact, the number won't even show up on your bill.

If you prefer typing to talking, then 24/7 chat is available at www.gamblinghelponline.org.au.

There are also GambleAware counselling services across NSW. To find one near you call 1800 858 858 or look up your local service at www.gambleaware.nsw.gov.au/i-need-support.

There are specialised support services available for women, those who identify as Aboriginal and Torres Strait Islanders, and for people who speak languages other than English.

Financial counselling and legal assistance is also available if you're facing financial or legal challenges due to gambling.

If you're not ready to talk to a counsellor, there are options such as self-exclusion from venues or online, self-help resources online at the GambleAware website and a special section for family and friends that outlines simple actions you can take if you're worried about a loved one.

For more information, or to get support today, call 1800 858 858 or visit gambleaware.nsw.gov.au
